- Optional anti-graffiti film to polycarbonate window and graphics applied to sign panels

The Virtex is an Outdoor or Indoor Convex Sign, Poster and Notice Display System. It is Australia Made with a very high build quality to give a long reliable service life and endure applications with high levels of vandalism and demanding natural environments. They are very versatile and have a lot of scope for custom made requirements and finishes to fulfil all applications and budgets. Suitable applications and sign types such as; Pylon, Totem, Cantilever, Suspended, Wall and Pole mount either single or double or triple sided.

The product is used extensively through out Australia by local and state Governments and has a very good service life reputation.

The frame is a specially designed marine grade structural aluminium extrusion.

The display window is Polycarbonate that offers good resistance to concentrated high impact shattering and burning, but has poor resistance to cleaning blemishes and haziness from graffiti removal. Hence the optional upgrade of extra protection offered in an anti-graffiti film applied to the window to offset this disadvantage. Note: On the very very rear occasion this film could blister and we do not offer warrantee against this.
